

CIES vocational training database

The CIES database has queries on multiple topics—client enrollments, vendor spending, vendor outcome measurement, exception reports that identify potential billing issues, and other analytical queries.

CIES Database

[Download data to ESP's database](#)

Client Enrollment and Cohorts	Client enrollment information; fiscal year cohorts
Client Payments	Client enrollment information; fiscal year cohorts
Exception Reports	potential errors: double-billing; double-enrollments; billed for Supports with no JC; M1 billing errors; no SSN, no Service Authorization Number; etc.
Vendors	# slots awarded vs. used, clients for active/closed vendors, etc.
Outcome Measurement	# JCs, outcome rates by cohort, length of stay
Administrative Tasks	Select vendors active this year, # slots per vendor
Import Enrollments and Expenditures	Import EHS enrollment and expenditure spreadsheets

[check expenditures for a client](#) [check enrollment for a client/vendor](#) [check all enrollment iterations for a client \(raw data\)](#)

Get 1 client's enrollment history

enter data in ONE of the fields, then hit button to clear data, backspace to delete it

SSN

Client ID

[Get Client's Enrollment History](#)

after you view the query results, close the query (exit door), and then type in here the next ID you want to look up

Note: The best ID to use is SSN, since that will show all of that person's Client IDs (and Enrollment IDs for those Client IDs). If a vendor used 2 Client IDs (or Enrollment IDs) and you use that ID field, then you'll miss the second ID; this means if you run the expenditure query, you could miss some of the billing.

Get 1 client's expenditures

enter data in ONE of the ID fields, then hit button to clear field, backspace to delete what you typed

Client ID

Enrollment ID

[Get Client's Expenditure Data](#)

after you view the query results, close the query (exit door), and then type in here the next ID you want to look up

Note: Enrollment ID will only give payments for that ID; Client ID will give payments for all enrollments. If you think you're missing data, then use Enrollment query and look up client by SSN to get all their Client IDs and Enrollment IDs

created in 2010 by Rebecca Kushner

The version of the database I made for staff is much simpler—only a few pages, with only a few queries on each of those pages. The focus is on queries useful for vocational training contract managers' daily work.

CIES Database

Client Enrollment and Cohorts Client enrollment information; fiscal year cohorts

Client Payments Client enrollment information; fiscal year cohorts

Exception Reports potential errors, such as no SSN, no Service Authorization Number, no TAO on SA#, etc.

Get 1 client's enrollment history

enter data in ONE of the fields, then hit button
to clear data, backspace to delete it

SSN e.g., 111223333

Client ID

Get Client's Enrollment History

after you view the query results, close the query (exit door), and then type in here the next ID you want to look up

Note: The best ID to use is SSN, since that will show all of that person's Client IDs (and Enrollment IDs for those Client IDs). If a vendor used 2 Client IDs (or Enrollment IDs) and you use that ID field, then you'll miss the second ID; this means if you run the expenditure query, you could miss some of the billing.

Get 1 client's expenditures

enter data in ONE of the ID fields, then hit button
to clear field, backspace to delete what you typed

Client ID

Enrollment ID

Get Client's Expenditure Data

after you view the query results, close the query (exit door), and then type in here the next ID you want to look up

Note: Enrollment ID will only give payments for that ID; Client ID will give payments for all enrollments. If you think you're missing data, then use Enrollment query and look up client by SSN to get all their Client IDs and Enrollment IDs
